

Abstract

Suppliers don't know demands, buyers don't know the supplies, we close the gap so both side see same truth, plan accordingly. End of guess games.

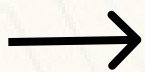

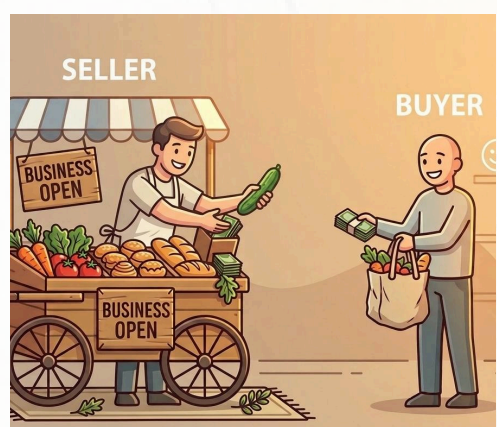

The problem

- Market Separation

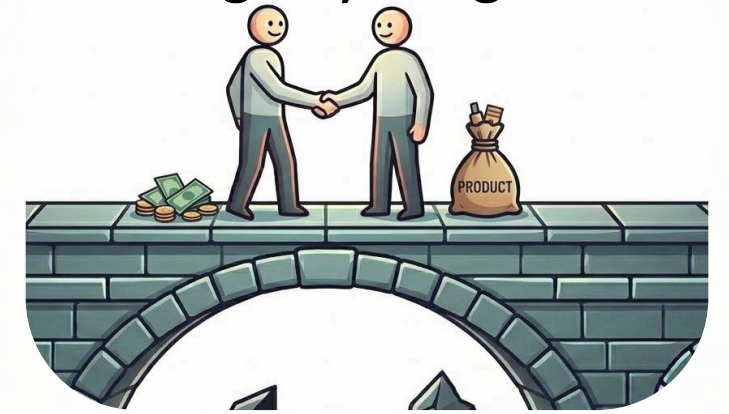

- Extreme price volatility

eg: I saw cucumber price drop from 100TL to 3TL; 97% loss

- Volatility hurt everyone, except the middleman!

- Supplier to buyer.** Direct; like ordering anything else online

- Stable Price:** The agreed price, does not change

- Transparency:** both side see the same numbers, same market signs, no hidden cuts.

Results

Total transparency, no more blindness, both see everything.

stable price, no more surprise 97% price cut.

full control of the profit margin, no money lost in the dark.

Methodology

Agree & Contract

state common interest
Plan together, price, dates...
Seal with a contract

Contract bonded partners

Shipment & Confirm

Supplier mark shipped
buyer mark received
transport is optional

Confirmed delivery

Pay & Prove

Buyer pays, upload the receipt
Mark paid..[to confirm]
Supplier confirms receipt
Mark paid..[successful]

Confirmed payment

Trust & Repeat

Deal Counted as complete
one's rate is recorded
Low rate score, lose trust
decide on next move.

Updated Trust score

Conclusion

Close the gap. Solve the root. Everything else gets easier.

No more guessing. In world of big data, we shouldn't be failing due to loss of information, data replace assumptions.
